

Self-taught and self-motivated, I bought an O'Reilly book on PHP 3 years ago, and dove in.

In High School I worked in MATLAB, creating a gui to manipulate phasors. From there I coded a full suite of statistical operations into my TI-86. I took a hiatus from coding during University; but got the bug again after graduating.

My first project in PHP was a PayPal integrated eCommerce site. I couldn't get the hang of SQL syntax, and so everything was written as serialized arrays to hard files on the server!

In my three years at Stellaractive, I've accrued a wide skill set, in addition to developing expertise in PHP and JavaScript.

Lately I've been having fun developing my own coding framework. It's been great for getting a better understanding of why other frameworks I've worked with are written the way that they are. And also more abstract things, like feeling how composition can be a better approach than inheritance.

I am looking forward to an opportunity to put my skills to work in NYC.

Technical Skills

Like: php, javascript, mysql, bash, apache

Experience

Lead Developer – Stellaractive

2009 - Current

- Worked on big and small projects from inception to production
- Requirements gathering
- Database Architecting
- Application Development
- Design Implementation (occasionally doing some designing as well)
- Troubleshooting Server Issues
- Sundry Domain related tasks (Registration, SSL Certificate Management, DNS etc)
- Self-Directed
- Taking initiative on improving internal applications and processes
- Providing support to End-Users
- Ensuring PCI Compliance
- Consulting with salespeople to build quotes for projects

Projects & Interests

Stack Overflow – <http://stackoverflow.com/users/635766>

February 2011 - Current

Written 222 answers. Active in php, javascript, jquery, html, mysql and 1 other tags.

GitHub - radcanon – <https://github.com/andromedado/radcanon>

June 2012 - October 2012
